### Abstract

Correction to Shavit Grievink L, Penny D, Hendy MD, Holland BR: **LineageSpecificSeqgen: generating sequence data with lineage-specific variation in the proportion of variable sites.** *BMC Evol Biol* 2008, **8**(1):317.

### Correction

Since publication of our article [1], we discovered an error in the second example. For this example, we state in the paper, we used the program MrBayes [2] with the JC+I+Cov model. However, we now found that, albeit appearances, this model is not implemented in MrBayes [2]. In fact, no combination of I+Cov (e.g. HKY+I+Cov, GTR+G+I+Cov) is currently implemented in MrBayes [2]. Instead, the program ignores the I parameter, so tree reconstruction in this example was therefore effectively done using the JC+Cov model. This does not affect the conclusion of our paper that phylogenetic estimation can be misleading for sequence data simulated with lineage-specific properties.
